ANY RUN

Analysis date (UTC):	VM's OS:
18 October 2026, 15:50	Windows 10 Professional (build: 19044, 64 bit)

Analysis result

Threat level: No threats detected

Full analysis: https://app.any.run/tasks/6beeb3ff-8858-40dc-9130-2607f2771023

Submitted object

Main analyzed object: sample-100.eml

MIME: message/rfc822
File info: RFC 822 mail, ASCII text, with CRLF line terminators
MD5: 4DD77CA48BA1C3437713B8DD8B4EFF7E
SHA1: 34096D58535F2C201B15FB577BB9316BE5B8EFE5
SHA256: 9FB2E491E28E6848614AE9539E2F685EE5C75357339505998B91FB9B89B3127E

AI Summary

Analytical classification

- **Description:** No threats detected
- **Tags & interpretation:**
  - (No raw tags provided.)
- **Threat level:** No threats detected
- **Main analyzed object:** Unknown URL

Executive summary

A user opened an email attachment in Outlook. The attachment was executed from a temporary directory as `ai.exe`, which can be a normal artifact of how email clients handle attachments. No suspicious behavior is inferred from this path alone.

Attack chain

1. A user opened an email attachment in Outlook.
2. The email attachment was executed from a temporary directory as `ai.exe`.
3. The execution of `ai.exe` was initiated with GUID-like command-line arguments.
4. No further suspicious behavior or network activity was observed in the execution summary.

Infrastructure & techniques

The execution summary shows a standard email attachment opening scenario with no evidence of malicious behavior. The `ai.exe` file was executed from a temporary directory, which is a common behavior for email clients when handling attachments. No suspicious network activity or redirection was observed. The process tree includes standard system processes and no additional suspicious infrastructure was identified.

The observed behavior is consistent with normal email client operations and does not indicate any malicious activity or infrastructure.

Conclusion

The execution summary does not show any signs of malicious activity or threat behavior. The observed behavior is consistent with normal email client operations. A practical analytic takeaway is that execution from a temporary directory alone does not indicate suspicious behavior, and further investigation would be required to determine the nature of the attachment.
